15-minute Neighborhoods: Improving Environmental Health by Increasing Walkability

Nick Tritt, @NickTritt1, Program on the Environment, University of Washington
Site supervisor: Gordon Padelford, Seattle Neighborhood Greenways
Faculty advisor: Julie Johnson, Landscape Architecture, University of Washington

- Urban planning focused on cars leads to air and noise pollution, social isolation and health issues

- 15-Minute Neighborhoods are highly walkable by bringing amenities to where people live

- The aim of this study is to research pedestrian needs to help cities plan for people, not cars
