

Ashley Braun

Ashley Braun is a Seattle-based freelance science and environmental journalist whose reporting has taken her from Australia's Great Barrier Reef to the United Nations climate summit in Morocco. Her writing—which spans the ethics of gene editing for conservation, underwater killer robots, and the controversial Pebble Mine—has appeared in publications such as [Longreads](#), [Science](#), [The Atlantic](#), and [Hakai Magazine](#). She also serves as an editor for the climate and energy investigative news site [DeSmog.com](#) and is a fact-checker for Science News and Discover Magazine. Before embarking as a freelancer, Ashley was a science writer and editor for the National Oceanic and Atmospheric Administration (NOAA) and got her start at the irreverent online environmental news site [Grist.org](#). She graduated from the University of Notre Dame with a degree in environmental science. You can find her online at [ashleybraun.com](#).
