Do you want to tell a convincing story with your data?
Are you interested in exploring methods for data interpretation and visualization?
What about some hands-on practice analyzing qualitative data?

If you answered yes to the questions above, ENVIR 495C is the course for you.

This course is a practical workshop on analyzing socio-environmental data. We will explore methods for analyzing quantitative and qualitative data ranging from social to environmental topics.

Students will have the opportunity to work on their own research data and practice data visualization and presentation.
