OPEN TO ALL STUDENTS

Required Core Course
For ENVIR majors

Instructors:

Yen-Chu Weng, PhD

Tim Billo, PhD

- Learn about current and historical environmental challenges and responses, from climate change to social justice.
- Recognize the complexity in environmental issues and our local and global connection to the issues.
- Participate in a dynamic and unique learning experience and be taught by two instructors with varied expertise.
- Work in small teams and present at a virtual poster symposium.

This class is an excellent opportunity to learn about the Environmental Studies major! This major focuses on the interactions between humans and the environment. Building on a foundation of natural science, social science & humanities, the major offers students a flexible curriculum that includes a project-based internship with a community partner as an integral part of the capstone sequence. Concentrations for the major include Policy & Planning; Climate & Society; Conservation of Living Systems; Education & Communication; Food Studies; and Sustainability.
